

Abstract

The present invention relates to mixtures containing
A) compounds of the formula (I) and (II)

where R^1 is independently at each instance hydrogen or a methyl radical,

R^2 is independently at each instance a linear or branched, aliphatic or cycloaliphatic radical or a substituted or unsubstituted aromatic or heteroaromatic radical and

m and n are each independently an integer of not less than 0 subject to the proviso that $m + n > 0$,

and

B) at least one ethylenically unsaturated monomer (A) which is different from the compounds of the formula (I) and (II).

The present invention further relates to processes for polymerizing these mixtures, the highly transparent polymers thus obtainable and to their use.
